◆ AWS CLOUD PRACTITIONER BOOTCAMP

THURSDAY — SESSION 2

GitHub Lab — Shared Responsibility + Risk Awareness

◆ LAB OBJECTIVE

This GitHub lab introduces students to:

- Basic GitHub navigation
- Reading cloud documentation
- Understanding AWS risk scenarios
- Governance thinking
- Security awareness practices

This is designed for:
✓ Beginner AWS students
✓ Students new to GitHub
✓ Cloud Practitioner preparation

◆ BEFORE YOU START

Students Must Have:

✓ AWS Account
✓ GitHub Account
✓ Internet browser
✓ Basic understanding of:

- IAM
- S3
- EC2
- Security Groups

◆ STEP 1 — OPEN GITHUB

Go to:

[GitHub Official Website]

◆ STEP 2 — SIGN IN OR CREATE ACCOUNT

If you do not have an account:

- Click:

Sign Up

Create:

- Username
- Email
- Password

Verify your email.

◆ STEP 3 — OPEN THE BOOTCAMP REPOSITORY

Instructor Repository:

```
[PASTE YOUR GITHUB REPOSITORY LINK HERE]
```

Example:

```
https://github.com/yourname/aws-cloud-practitioner-bootcamp
```

◆ STEP 4 — UNDERSTAND THE REPOSITORY STRUCTURE

Students should look for folders like:

```
labs/
notes/
slides/
risk-scenarios/
```

◆ RECOMMENDED STRUCTURE (FOR YOU)

Your repository can contain:

```
aws-cloud-practitioner-bootcamp/
│
├── README.md
├── session-1-foundations/
├── session-2-shared-responsibility/
│   ├── notes/
│   ├── labs/
│   ├── screenshots/
```

```
|   └── governance-checklist/
```

◆ STEP 5 — OPEN SESSION 2

Navigate to:

`session-2-shared-responsibility/`

Inside students should find:

- Student notes
- Lab instructions
- Governance checklist
- Screenshots/examples

◆ STEP 6 — READ THE README FILE

Explain to students:

The:

`README.md`

file usually contains:

- Lab instructions
- Objectives
- Setup steps
- Important notes

This is the "main instruction page" of most GitHub repositories.

◆ STEP 7 — DOWNLOAD THE LAB FILES

Students can:

Option 1 — Download ZIP

Click:

Code → Download ZIP

Option 2 — Clone Repository (Advanced)

Students with Git installed can run:

```
git clone https://github.com/yourname/aws-cloud-practitioner-bootcamp.git
```

◆ STEP 8 — COMPLETE THE LABS IN AWS

Students should now:

- Open AWS Console
- Follow the Session 2 labs
- Compare what they see in AWS with GitHub documentation

◆ REQUIRED STUDENT ACTIVITIES

Students must complete:

◆ ACTIVITY 1 — IAM REVIEW

Task

Create:
✔ IAM user
✔ MFA protection

Screenshot Required

Take screenshot of:

- IAM dashboard
- MFA enabled

Save inside:

```
screenshots/
```

◆ ACTIVITY 2 — S3 RISK REVIEW

Task

Create:
✔ S3 bucket

Review:
✓ Public Access Block settings

Questions

Students must answer:

1. Why is public access dangerous?
2. Who is responsible for bucket security?

◆ ACTIVITY 3 — SECURITY GROUP REVIEW

Task

Launch:
✓ EC2 instance

Review:
✓ Security Group inbound rules

Compare:

```
0.0.0.0/0
```

vs

```
My IP
```

◆ STEP 9 — GOVERNANCE THINKING EXERCISE

Students must complete this table:

AWS Resource	Risk	Governance Control
S3 Bucket	Public exposure	Block public access
EC2	Open SSH	Restrict inbound rules
IAM	Excessive permissions	Least privilege

◆ STEP 10 — COMMIT PERSONAL NOTES (OPTIONAL)

Students comfortable with GitHub may:

- Create their own notes

- Upload screenshots
- Commit updates

◆ OPTIONAL BEGINNER GITHUB COMMANDS

Check Files

```
dir
```

OR

```
ls
```

Enter Folder

```
cd folder-name
```

Upload Changes

```
git add .
git commit -m "Completed Session 2 Lab"
git push
```

◆ WHAT STUDENTS SHOULD LEARN

After this lab students should understand:

✓ AWS responsibility vs customer responsibility
✓ Why IAM matters
✓ Why public exposure is dangerous
✓ Why governance matters early
✓ Basic GitHub navigation
✓ Cloud risk awareness principles

◆ INSTRUCTOR RECOMMENDATION (IMPORTANT)

Inside your GitHub repository include:

✓ Architecture screenshots
✓ Example IAM policies
✓ Example S3 configurations
✓ Governance checklist PDFs

✓ Session slides
✓ Student notes

This dramatically increases perceived professionalism and learning quality.

◆ SUGGESTED REPOSITORY NAME

```
aws-cloud-practitioner-bootcamp
```

OR

```
aws-governance-foundations
```

◆ FINAL PRINCIPLE

Cloud engineering is not only about deploying resources.

It is about deploying them responsibly, securely, and with governance awareness from day one.
