

◆ AWS CLOUD PRACTITIONER BOOTCAMP

**4-WEEK EXECUTION PLAN (MON • THU • SAT |
20:00–21:00)**

◎ WEEK 1 — FOUNDATIONS + SECURITY CONTROL

◆ MONDAY (Session 1)

Cloud Foundations + Account Orientation

Core Topics:

- What is cloud computing (real meaning vs buzzwords)
 - Cloud models (IaaS, PaaS, SaaS)
 - AWS global infrastructure (Regions, AZs)
 - AWS Management Console walkthrough
-

◆ GitHub Project (MANDATORY)

Students create their portfolio:

Repo:

`aws-cloud-practitioner-bootcamp`

Folder:

```
Week-1-Foundations/  
- cloud-basics.md  
- aws-global-infrastructure.md
```

◆ Outcome

Students understand what cloud is and **start building a documented portfolio**

◆ THURSDAY (Session 2)

Shared Responsibility + Risk Awareness

Core Topics:

- Shared Responsibility Model (deep explanation)
 - Real-world risk scenarios
 - Why governance matters early
-

◆ GitHub Project

Update repository:

```
Week-1-Foundations/  
- shared-responsibility.md  
- risk-scenarios.md
```

Students must:

- Write 1 real-world risk scenario
 - Explain who is responsible (AWS vs Customer)
-

◆ Outcome

Students think like **operators, not users**

◆ SATURDAY (Session 3)

Identity & Access Management (CRITICAL)

Core Topics:

- Deep dive into AWS IAM
 - Users vs Roles vs Policies
 - MFA + least privilege
 - Root account risks
-

◆ GitHub Project

```
Week-1-Foundations/  
- iam-basics.md  
- security-best-practices.md  
- screenshots/
```

Students upload:

- IAM setup screenshots
 - Summary of least privilege
-

◆ Outcome

Students can **secure an AWS account properly**

☉ WEEK 2 — CORE SERVICES (COMPUTE + STORAGE + DATABASES)

◆ MONDAY (Session 4)

Compute Layer

Core Topics:

- Amazon EC2 fundamentals
 - Instance types (why they matter)
 - Intro to AWS Lambda
-

◆ GitHub Project

```
Week-2-Compute/  
- ec2-overview.md  
- compute-decision-guide.md
```

Include:

- When to use EC2 vs Lambda
-

◆ Outcome

Students understand **compute decision trade-offs**

◆ THURSDAY (Session 5)

Storage Layer

Core Topics:

- Deep dive into Amazon S3
 - Object vs block storage
 - Storage classes
-

◆ GitHub Project

```
Week-2-Storage/  
- s3-notes.md  
- storage-strategy.md
```

Students must explain:

- Why S3 $\neq$ database
-

◆ Outcome

Students understand **data storage strategy**

◆ SATURDAY (Session 6)

Databases

Core Topics:

- Amazon RDS vs Amazon DynamoDB
 - Relational vs NoSQL
 - Decision scenarios
-

◆ GitHub Project

Week-2-Databases/
- database-comparison.md
- use-case-mapping.md

◆ Outcome

Students understand **data architecture fundamentals**

◎ WEEK 3 — NETWORKING + ARCHITECTURE THINKING

◆ MONDAY (Session 7)

Networking Fundamentals

Core Topics:

- Amazon VPC basics
 - Subnets (public vs private)
 - Internet Gateway
-

◆ GitHub Project

Week-3-Networking/
- vpc-basics.md
- subnet-design.md

◆ Outcome

Students understand **AWS network structure**

◆ THURSDAY (Session 8)

Security in Networking

Core Topics:

- Security Groups vs NACLs
 - Open ports risks
 - Misconfiguration scenarios
-

◆ GitHub Project

```
Week-3-Networking/  
- network-security.md  
- attack-scenarios.md
```

◆ Outcome

Students understand **attack surfaces**

◆ SATURDAY (Session 9)

Architecture + Use Cases

Core Topics:

- Service integration
 - Basic architectures
 - High availability concepts
-

◆ GitHub Project (IMPORTANT)

```
Week-3-Architecture/  
- architecture-diagrams.md
```

Students must:

- Describe a simple web architecture:
 - Amazon EC2
 - Amazon S3
 - AWS IAM
-

◆ Outcome

Students can **reason about system design**

☉ WEEK 4 — BILLING + EXAM EXECUTION

◆ MONDAY (Session 10)

Billing & Pricing

Core Topics:

- Pay-as-you-go model
 - Cost drivers
 - Pricing calculator
 - Support plans
-

◆ GitHub Project

```
Week-4-Billing/  
- pricing-models.md  
- cost-optimization.md
```

◆ Outcome

Students understand **cost control**

◆ THURSDAY (Session 11)

Exam Preparation Strategy

Core Topics:

- Question patterns
 - Elimination strategies
 - Scenario interpretation
-

◆ GitHub Project

Week-4-Exam/

- exam-strategy.md
 - common-traps.md
-

◆ Outcome

Students become **exam-ready thinkers**

◆ SATURDAY (Session 12)

Mock Exam + Final Reinforcement

Core Topics:

- Full mock walkthrough
 - Weak area correction
 - Final Q&A
-

◆ FINAL GitHub DELIVERABLE (CRITICAL)

Students update README:

- What they learned
 - Key services
 - Architecture understanding
 - Certification readiness
-

◆ Outcome

Students leave with:

- Exam readiness
 - A **complete cloud portfolio**
-

◆ PROGRAM INTELLIGENCE (UPGRADED)

This is now not just a schedule.

It is a **system**:

- Week 1 → Thinking + Security discipline
- Week 2 → Service mastery
- Week 3 → Architecture reasoning
- Week 4 → Decision + exam execution

PLUS:

Every week produces **visible proof of learning on GitHub**

◆ YOUR STRATEGIC EDGE

You are now delivering:

- Training
 - Portfolio
 - Real-world thinking
 - Exam readiness
-

◆ FINAL POSITIONING

This program does not produce:

Students who watched sessions

It produces:

Individuals who can **show what they know**

If you want the next layer, I can build:

- A **ready-made GitHub repo template (copy/paste)**
- A **grading rubric for portfolio evaluation**
- A **certificate system tied to GitHub completion**

That's how you scale this into a **premium, repeatable system**.
