
◆ AWS CLOUD PRACTITIONER BOOTCAMP

WEEK 1 — SESSION 1 WORKBOOK

CLOUD FOUNDATIONS & CORE SERVICES

◆ SECTION 1 — CONCEPT REINFORCEMENT

◆ Exercise 1: Define in Your Own Words

Instruction:

Rewrite the following concepts in your own words (max 2 lines each):

1. Cloud Computing
 2. On-Premise Infrastructure
 3. CapEx
 4. OpEx
 5. Shared Responsibility Model
-

◆ Exercise 2: Concept Matching

Match the concept to its correct description:

Concept	Description
A. Cloud	1. High upfront cost model
B. On-Premise	2. Pay-as-you-go computing
C. CapEx	3. Physical infrastructure ownership
D. OpEx	4. Flexible cost model

◆ SECTION 2 — ARCHITECTURE UNDERSTANDING

◆ Exercise 3: Fill in the Gaps

Complete the statements:

1. A Region contains multiple _____
 2. Availability Zones provide _____ and _____
 3. Edge locations are used for _____
-

◆ Exercise 4: True or False

1. AWS is responsible for securing your application data
 2. Customers manage IAM permissions
 3. Availability Zones are located in different countries
 4. Cloud computing eliminates the need for scalability
-

◆ SECTION 3 — CORE SERVICES MASTERY

◆ Exercise 5: Service Identification

Identify the correct AWS service:

1. A company needs virtual servers → _____
 2. A company needs to store images → _____
 3. A company wants to control user access → _____
-

◆ Exercise 6: Use Case Mapping

Match each use case with the correct service:

Use Case	Service
Store backups	A. EC2
Run application	B. S3
Manage permissions	C. IAM

◆ SECTION 4 — SCENARIO-BASED THINKING (CRITICAL)

◆ Exercise 7: Scenario Analysis

Read carefully and answer:

Scenario 1:

A startup wants to launch a website quickly without buying servers.

Question:

Which AWS service should they use?
Why?

Scenario 2:

A media company needs to store thousands of videos securely.

Question:

Which service fits best?
Why?

Scenario 3:

An organization wants to restrict access so only managers can view certain data.

Question:

Which service should be used?
Why?

◆ SECTION 5 — EXAM CONDITIONING

◆ Exercise 8: Multiple Choice

Question 1:

Which service provides virtual servers?

- A. Amazon S3
 - B. AWS IAM
 - C. Amazon EC2
 - D. AWS CloudFront
-

Question 2:

Which model allows you to pay only for what you use?

- A. CapEx
 - B. OpEx
 - C. Fixed Cost
 - D. Subscription
-

Question 3:

Who is responsible for managing user permissions in AWS?

- A. AWS
 - B. Customer
 - C. Data Center
 - D. Region
-

◆ SECTION 6 — QUICK RECALL DRILL

◆ Exercise 9: Memory Mapping

Complete:

- EC2 → _____
 - S3 → _____
 - IAM → _____
-

◆ Exercise 10: 60-Second Drill

Instruction:

Without looking at notes, answer:

1. What is cloud computing?
 2. What is OpEx?
 3. What does IAM do?
-

◆ SECTION 7 — REFLECTION (ADVANCED THINKING)

◆ Exercise 11: Short Reflection

Answer briefly:

1. Why are companies moving from CapEx to OpEx?
 2. Why is shared responsibility important in cloud security?
 3. What is the risk of not using IAM correctly?
-

◆ ANSWER KEY (INSTRUCTOR CONTROL)

(Use after session or as review)

Section 2:

- AZs
- High availability, fault tolerance
- Content delivery

Section 4:

1. False
2. True
3. False
4. False

Section 5:

- EC2
- S3
- IAM

Section 6:

1. C
2. B
3. B

Section 7:

- Compute
 - Storage
 - Security
-
